

Dodge Dakota

Installation

1. Remove rear seatbelt stud. Install rear bracket to the rear barrier and loosely install to the seatbelt stud and replacing the seatbelt.
2. Place side screen vehicle and attach to the rear screen.
3. Install upper front and lower front brackets to the front screen. Install the foam tube to the front screen. Remove the front seat belt and remove the adjuster portion. **See Photo**. Remove the rear right seat rail bolt.
4. Place the front screen in the vehicle and attach to the side screen. Attach the upper bracket to the seat belt and the lower bracket under the seat rail and replace the bolt.
5. Install the screened floor bracket to the side and front screens. **Adjust the seatbelt up and down** to reduce clearance at the roof line. **(Some brackets may have to be bent more or less to achieve the desire fit.)**
6. After making final adjustments, tighten both seat belt lugs and replace plastic covers. Tighten the seat rail bolt. Tap screw the screened floor bracket to the Drive Shaft hump. Finish the foam tube

Watch for wires when drilling any holes
