

Dodge Durango SSV

2011-2017

Install Instructions

1. With the Cargo Barrier LOGO facing the front of the vehicle, loosely install the Cargo Barrier Brackets to rear cargo barrier. Brackets are side specific to conform with plastic.
2. Place cargo in the rear of the vehicle and hold against the seats and to the roof. Mark the plastic pillar post where the brackets will mount. Roughly 2.5 inches down from headliner.
3. Remove the pillar plastic from both sides and install the 1.5x1.5x2" block brackets to the pillar post with 2 tap screws each. **(be sure the brackets line up with your marks and do not interfere with the plastic or fins.)** Replace plastic on both sides. Drill the holes you marked and **LOOSELY** install the cargo barrier.
4. Slide front passenger seat forward and pull back the pillar post plastic. Remove outside rear seat rail bolt.
5. Place side screen in vehicle and slide between rear passenger and rear driver side seats, tipping up as you slide. Use a flat screw driver to open the area where the seatbelt is located between the seats. This will aid in getting the side screen in place. Align the side screen and cargo barrier and bolt together **LOOSELY**. Install the 14-gauge plate floor bracket to the lower front of the side screen, bend towards the prisoner section.
6. Install the "U" clamp around the emergency grab handle and secure. (may slide a piece of the foam tube between bracket and handle to avoid scratching and tighten fit.)
7. Install the lower front screen bracket under the seat rail and **LOOSELY** install the seat rail bolt.
8. Install the foam tube to the upper part of the front screen with zip ties (Do not go below the upper bracket mounting location.)
9. Place front screen in vehicle and attach to the upper seatbelt bracket and to the (4) predrilled holes on the side screen and floor bracket. **FINGER TIGHTEN ONLY!** Install the seat rail bracket to the lower front screen.
10. Tighten all bolts and fasteners, replace front pillar post plastic and finish foam tube.
